

REASONS TO APPLY CRANIAL/STRUCTURAL FRONTAL/OCCIPITAL DECOMPRESSION

After detached retina issues – wait 4-6 months! Major – wait for full time + doctor's release

Detoxing the brain – heavy metals, anesthesia, elderly on many medications, etc.

Swelling within the cranium

Concussions – non-diagnosed = min 3 weeks, diagnosed = Dr. release to normal life activities

Migraine headaches *(all headaches)*

Post surgery detoxing – anesthesia – *vital drip*

Sinus and inner ear swelling – tinitis (if calcification, no. if just pressure, yes.)

Eustacian tube release.

Chemotherapy – *just before the next treatment, not within 4 days after a treatment.*

Prevention of Alzheimer's *(stops it @ the level, makes them more workable, calmer, etc.)* *minimizes side effects*

Transition out of this life

Learning disabilities

Autism, Asperger's

Concentration challenges

Right / Left brain integration

Emotional shock / distress

Post traumatic stress disorder

Chakra balancing

Diaphragm balancing

“cranial colonic”

Focusing and eye problems

Re-establish homeostasis of the brain

TIA's (mini strokes)

Nervous system disorders – *i.e. Parkinson's, etc.*

Brain damage issues – *i.e. electro shock therapy, etc. chemical, etc*

Alzheimer's / Dementia

Lymphatic balancing and clearing

Lymphodema

Tics - facial

Minor seizures *(petite mal and smaller)*

Down's Syndrome

Fluid build-up in brain for elderly – Vertigo, Brain fog, etc

Glaucoma

Difficulty Sleeping

Immune system

Autoimmune conditions

Compromised immune system in the brain

prostate - most toxic organ in males
